

TASK 4

Case	Drug	ADR	Classification	<i>Adverse Event</i>
01	Amoxicillin	Skin rash, itching	Non-Serious, Expected	<i>ADR</i>
02	Ibuprofen	GI bleeding requiring hospitalization	Serious, Expected	<i>SAE</i>
03	Metformin	Lactic acidosis	Serious, Unexpected	<i>SUSAR</i>
04	Atorvastatin	Mild elevated liver enzymes	Non-Serious, Expected	<i>ADR</i>
05	Levofloxacin	Tendon rupture	Serious, Unexpected	<i>SUSAR</i>

Case 01: AMOXICILLIN

- **Seriousness-** No hospitalization or major medical condition.
Assessment: NON-SERIOUS
- **Expectedness-** Skin rashes and itching are common allergic reactions of Amoxicillin.
Assessment- EXPECTED

Case 02: IBUPROFEN

- **Seriousness-** Requires hospitalization.
Assessment: SERIOUS
- **Expectedness-** Consistent with available drug information.
Assessment- EXPECTED

Case 03: METFORMIN

- **Seriousness-** Life-threatening; Requires hospitalization.
Assessment: SERIOUS
- **Expectedness-** Not consistent with available drug information.
Assessment- EXPECTED

Case 04: ATORVASTATIN

- **Seriousness-** Requires hospitalization; Significant disability; Medically important condition.
Assessment: SERIOUS

- **Expectedness-** This ADR is already documented. Consistent with the current SmPC.
Assessment- UNEXPECTED

Case 05: LEVOFLOXACIN

- **Seriousness-** No hospitalization or major medical condition.
Assessment: NON-SERIOUS
- **Expectedness-** This ADR is either not listed in reference safety documents or different severity, frequency, or nature than documented
Assessment- UNEXPECTED
