

TASK 5

The Case: Post-Marketing Antibiotic Reaction

- **Reporter:** Dr. Lisa Green (General Practitioner).
 - **Patient:** 28-year-old female.
 - **Suspect Product:** **Levofloxacin** 500mg tablets (Antibiotic). Taken once daily for a urinary tract infection (UTI).
 - **Therapy Dates:** Started on June 22, 2026. Stopped on June 25, 2026.
 - **The Event:** On June 25, 2026 (Day 4 of therapy), the patient experienced a sudden, sharp pain in her left heel while walking. Dr. Green examined her and diagnosed an **acute Achilles tendonitis**. The doctor advised her to stop taking Levofloxacin immediately and rest the leg. The patient is recovering at home and did not require hospital admission.

01. ADR IDENTIFICATION

- CASE REVIEW

Identifiable Reporter: Yes (Dr. Lisa Green)

Identifiable Patient: Yes (28-year-old female)

Suspect Product: Yes (Levofloxacin)

Adverse Event: Yes (Achilles tendonitis).

- ANALYZE

a) Is there a temporal relationship? Yes. The symptoms appeared after 3 days after starting Levofloxacin.

b) Is the reaction drug-related? Probably.

c) What is the suspected drug? Levofloxacin.

d) Causality Assessment (WHO-UMC Scale)

Plausible time relationship? Yes

Known ADR to the drug? Yes

Cannot be explained by disease or other drugs? Unlikely. The patient has no medical history of musculoskeletal disorders, recent physical trauma or strenuous exercise that can account for sudden onset of Achilles tendonitis.

Dechallenge information? Positive. The sharp pain in the heel began to subside after Levofloxacin was discontinued.

Rechallenge information? Not done.

02. REPORTING (ICSR)

Patient Information: 28 yrs/F

Suspected Medicine: Levofloxacin

Adverse Reaction: Acute Achilles Tendonitis

Outcome: Recovering (Discontinued Levofloxacin)

03. CAUSALITY ASSESSMENT

PROBABLE

04. CLASSIFICATION

Seriousness: No hospitalization.

NON-SERIOUS

Expectedness: Consistent with current drug information.

EXPECTED

Assessment: ADR
